

Alexey Yurchenko

Senior Backend Engineer — Go / Python

alexes.dev@gmail.com · github.com/alexesdev

Based in Vietnam · Working time zone: UTC+6

Remote · Open to full-time and contract roles

PROFILE

I build backends, data pipelines, and business systems, with 15 years in software development. At P2P.org, I wrote Go/Python pipelines that processed terabytes of blockchain data. At FRESH, I led a team of 10 building software for two warehouses and approximately 1,000 daily orders. My current work is an open-source knowledge platform and AI agent infrastructure.

TECHNICAL SKILLS

Backend: Go, Python, TypeScript, Ruby; REST, GraphQL, gRPC / Protobuf.

Data: PostgreSQL, SQLite, BigQuery, Redis.

Infrastructure: Docker, Kubernetes, Google Cloud, S3, Nomad / Consul, CI/CD, Prometheus / Grafana.

Frontend: React, React Native.

EXPERIENCE

Independent Software Engineer — trip2g & AI infrastructure

2025 – Present · Remote

Built trip2g, an open-source knowledge platform (MIT), from prototype to a public service used by external users.

- Designed a Go backend for markdown publishing, knowledge graphs, and retrieval through Model Context Protocol (MCP); added search across federated knowledge bases.
- Built a hosting control panel on Nomad with pre-provisioned container slots for new instances; used SQLite with Litestream replication to S3 for persistent storage.
- Built agent deployment and memory infrastructure: dedicated knowledge bases, shared context, and a web interface for inspecting stored knowledge.
- Developed AI workflows for competitor research, content drafting, video generation, and landing-page creation.

Go · TypeScript · SQLite · Litestream · S3 · Nomad · MCP · RAG

Backend Engineer, Tool Team — P2P.org

Aug 2022 – Jan 2024 · Remote

Built data infrastructure for Proof-of-Stake blockchain networks.

- Developed Python and Go extractors for Cosmos SDK networks; processed terabytes of on-chain data into BigQuery for analysts.
- Owned the pipelines from extraction through transformation to delivery. Built gRPC / Protobuf APIs for the results and worked with other teams on data schemas and service requirements.
- Built an open-source Agoric state viewer in React / TypeScript while owning the Agoric integration; the Agoric team adopted the tool for daily use.
- Deployed services on Google Cloud and Kubernetes using Docker.

Python · Go · BigQuery · gRPC · Protobuf · Google Cloud · Kubernetes · Cosmos SDK

EARLIER EXPERIENCE

Head of IT / Hands-on Engineering Lead — FRESH

Jul 2018 – Apr 2022 · Moscow

Responsible for software development and infrastructure at an e-commerce business with two warehouses and approximately 1,000 orders per day.

- Managed a cross-functional team of 10 across backend, frontend, mobile, design, and product; led hiring, mentoring, and technical direction.
- Led technical integration of acquired businesses, consolidating their applications, data, and operational workflows.
- Designed and built a warehouse management system covering inventory, supplies, and shipments; integrated role-specific tools with industrial scales and cash registers.
- Built Go / GraphQL services, React storefronts, and React Native applications; introduced company-wide Metabase dashboards for operational reporting.
- Operated 30+ virtual machines using Nomad / Consul, automated provisioning, GitLab CI/CD, and Prometheus / Grafana monitoring.

Go · GraphQL / gqlgen · PostgreSQL · React · React Native · Nomad · Ansible · Metabase

Full-stack Engineer — Statsbot

Dec 2017 – Apr 2018 · Moscow

- Developed features for an early-stage analytics SaaS using Ruby on Rails and React, working on business intelligence and analytical workflows.

Full-stack Engineer — FRESH

Jan 2014 – Dec 2017 · Moscow

- Joined as the sole engineer; maintained and extended the Rails / React commerce platform and mobile web experience.
- Fixed a performance issue in Arbre (ActiveAdmin's rendering library), speeding up the affected rendering path by approximately 8×; the fix was merged upstream.
- Maintained the Objective-C iOS application and migrated it to React Native.

Freelance Web Developer

2011 – 2014

- Delivered websites and web applications for small businesses using PHP / Yii, Ruby on Rails, JavaScript, and relational databases.
